

Ordinary loop pile carpet

Kraus ZipperLock®

# ZipperLock® Technology

In regular loop pile carpet, one loose yarn can unravel into an unsightly continuous zipper. Dual Bonding and Interlocking Tuft Placement... means Kraus carpets cannot unravel like regular commercial carpet.

## dual laminate bonding

Compound #1 is applied to the yarn on the primary backing and penetrates the yarn bundles to ensure fiber bond and tuft lock.

Compound #2 has a higher viscosity and is applied to the secondary backing to provide superior lamination strength.

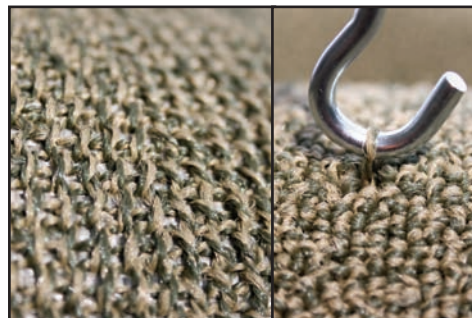

Kraus carpet with Dual Laminate Bonding and Interlocking Tuft Placement is covered by our ZipperLock® warranty because it can't unravel or zipper.

## HERE'S HOW IT WORKS:

### interlocking tuft placement

Ordinary loop pile carpet

Kraus ZipperLock®

Conventional loop pile carpet is tufted in parallel rows. This method does nothing to prevent zippering. Kraus' interlocking tufts are staggered in a special crossover pattern. When a loop is pulled up, it hooks with its neighbors.
